Welcome to HPAC Energy Centre

HPAC Energy Centre is a locally owned, family business established in 1986. HPAC Energy Centre prides itself in offering the highest quality products at very competitive prices and have been Helping People Achieve Comfort across Canterbury for over 25 years.

HPAC Energy Centre now boasts a comprehensive range of energy conscious solutions to help ensure your home or business maintains a comfortable and healthy environment at the lowest possible on-going cost.

With heat recovery and proper ventilation now being recognised as essential to maintaining a building's optimum health performance at the lowest possible running cost it makes sense to invest in the right equipment to ensure this work is done once and done right the first time.

HPAC Energy Centre isn't just about residential heat pumps – our product range includes the following:

- Split system domestic heat pumps
- Multi-head heat pumps
- Ducted heat pumps
- Underfloor heating systems
- Domestic hot water heat pumps
- Swimming pool heat pumps
- Solar water heating
- Ventilation and heat recovery
- Insulation
- Radiant heaters
- Solar cell
- And more!

John Kelly
Managing Director

Why choose HPAC Energy Centre?

HPAC Energy Centre is a well-established business that has been providing heating and ventilation services to Canterbury for over 25 years.

Over that time HPAC Energy Centre has worked with, and continues to work with, a number of large and small building companies for the supply and installation of heat pumps to new homes at the construction stage. As a result of this experience HPAC Energy Centre has well established systems in place to coordinate our work with the builder to ensure pre-pipes and completions are project managed around the critical build timelines. The end result is a top quality heat pump, installed properly with no disruption to the build process.

HPAC Energy Centre is also New Zealand's largest Daikin dealership and one of the largest Panasonic dealerships in the South Island. This scale gives HPAC Energy Centre a strong purchasing position and we are able to secure stock at extremely competitive rates which are passed on in our pricing.

We are also able to offer a discounted fixed pricing structure for larger customers and can turn around quotes within 48 hours for more casual enquiries.

Working with HPAC Energy Centre is simple - all we require is 1 week notification for pre-pipe scheduling and 1 week notification for completions. Urgent work can often be accommodated also.

All HPAC Energy Centre installers are trade qualified, safety conscious and carry Site Safe Passports. Our business operates under a 'no harm' policy and our staff also know the importance of leaving the site clean and safe on completion of their work.

Staff are also regularly trained in Health and Safety matters and the business undergoes regular OSH audits.

An essential part of the HPAC Energy Centre business is our after sales support and we operate a full service workshop with a team of qualified technicians who can quickly respond to any warranty or breakdown issue.

HPAC Energy Centre are authorised service agents for Daikin, Panasonic, Mitsubishi Electric, and Fujitsu. You are assured that any repair or maintenance work will be carried out correctly by a properly trained technician.

HPAC Energy Centre is a trusted Canterbury business with an excellent track record of working with the building industry and we would be delighted to assist you in providing great heating and ventilation products for you and your customers.

- Well established local business
- Experienced with working with building companies
- New Zealand's largest Daikin dealership
- Competitive pricing
- Quick quote turnaround
- 1 week notification for pre-pipe and completions
- Trade qualified installers
- Safety conscious workers
- Site left clean and tidy
- Authorised service agents
- Site Safe Passport holders

Heat Pumps

We are the leading provider in the South Island with expertise in all aspects of heat pump systems including specialist brand Daikin. We are proud to be New Zealand's number 1 Daikin dealer.

Multi-Split Systems

A cost effective way of heating and cooling a number of rooms from one outdoor unit. With a wide range of indoor units available a multi-split system is the perfect solution for many homes.

Ducted-Split Systems

A properly designed and installed ducted split system will give you years of luxurious all-encompassing heating and cooling throughout your whole house with discrete ceiling vents. The HPAC team will tailor a ducted split system to your specific needs.

Underfloor Heating

Ideal for someone building a new home and looking for a total comfort heating system that is almost invisible. Underfloor heating means that heating the entire home can be achieved at a fraction of the running cost of other systems.

Domestic Hot Water

One of the best investments a house could make, with benefits all year round. The hot water heat pump is one of the most efficient forms of hot water heating available, giving you the same amount of hot water for between 50-70% less energy.

Ventilation & Heat Recovery

Many homes have issues with condensation due to poor ventilation. We have the solution with heat recovery systems that allow fresh air to be brought into the house while recovering the existing heat.

Pool Heating & Indoor Pool Ventilation

We have a large variety of New Zealand made heat pumps to suit all pool sizes and can provide you with the most efficient size to heat your pool, ensuring you don't pay extra for an oversized system that costs you more to run.

Insulation

For a warm, dry, quiet, healthy and energy-efficient home we use non-irritating polyester thermal and acoustic insulation products designed for both the residential and commercial markets.

Radiant Heating

Panel heaters are an excellent choice for hallways and bedrooms where some additional local heating may be required. HPAC recommends NOBO panel heaters as they have an extensive warranty and come with a built in thermostat. A digital timer and castors can be added as extras.

Solar Cell

For those seeking an 'off the grid' solution solar cell (photovoltaic) technology may form part of a total energy capture / conservation solution. HPAC can source a solar cell solution that is right for you and can offer advice on system design and storage technology.

Commercial Solutions

We are capable of designing, supplying, installing and servicing an extensive range of top quality products and services for all situations, catering for everything from a small shop to the most complicated multi-story building, laboratory, low and high occupancy offices, schools, banks, hotels, or any other premises.
